The Start of Something New

## 3 Alarm One Piece Smart Tag

Retail shrinkage is a universal challenge, but eco One-Piece Tag is here to change the game. Our advanced security system not only self-alarms when tampered with but also triggers the EAS detection system at store entrances. Whether a thief attempts to remove the anti-theft device or walks out with it still attached, eco One Piece Tag ensures that security is immediately notified. While each retailer has their own protocol for handling theft, One Piece Tag offers an extra layer of protection by helping you identify what's been stolen—especially high-value items.

### Comprehensive Security Features

One Piece Tag latest design offers all the standard anti-theft features, plus enhanced capabilities.

Here's how it works:

The unique design of the WG One-Piece Smart Micro Shell Tag features an integrated pin that reduces the application process from two steps to one. This allows retailers to spend less time on in-store tagging and focus on sales. The integrated pin allows retailers to feel at ease when customers remove the tag at the self-checkout without any worries of danger to the customer being pricked by the pin. Our patented clam shape tag prevents the pin from being attacked.

One-Piece Smart Micro Shell Tag employs a dual technology design that offers the retailer one of the most secure tags in the industry. Its sleek rounded edge and sloping design makes the tag tamper proof with unauthorized removal nearly impossible. It offers your choice of a 3 or 4 alarm 58 kHz or 8.2 MHz technology for maximum protection. Our One-Piece Smart Micro Shell Tag was created because of our popular Micro Shell Tag as well as customer feedback. WG responded and captured all the features of the Micro Shell Tag, in a one-piece solution. This ergonomically correct design makes our One-Piece Smart Micro Shell one of the most effective, tamper-proof tags in the industry. The tag incorporates a ball clutch mechanism that is detached with a super lock magnetic detacher.

One-piece design helps eliminate the need to sort pins separately.

Speeds up the check-out process with easy tag removal at the point-of-sale.
