

Bandit II IR 4 Alarm Smart Tag

The Bandit II IR Smart Tag is specifically designed for advanced security of boxed merchandise and is easy for your employees to use. It boasts faster application and removal by an authorized detacher than any other EAS box tag, and can be equipped with up to four alarm levels to safeguard against theft or tampering.

Features:

- ◆ Bandit II Tag easily attaches to boxed merchandise
- ◆ The WG Bandit II's slide lever feature, when engaged activates the IR smart tag. When the tag has been deactivated the lever will automatically unlock, allowing for an easy release. (One Handed Operation)
- ◆ The plunger on the bottom of the tag detects when the tag is resting against the surface
- ◆ The Bandit II IR smart tag can only be deactivated with the patented WG IR detacher or a WG handheld remote control. The remote control has a security feature that allows the remote to remain activated for a pre-determined period of time. Bandit II's full-size plunger with anti slip backing covers a greater surface area and holds the tag firmly in place.
- ◆ Our Wi-Fi visual and audible alarm activates when the Bandit II tag alarms. Cloud based data storage is available at no additional charge via Wi-Fi access. This allows the LP or AP departments to conduct forensic investigations and track alarms with video by store location, department and time of day. The Bandit II is available in 58kHz and 8.2 kHz frequencies and can be deactivated with IR or super lock detachers

EAS Alarm: When tag is in armed status, any events causing tag to enter the EAS system's field will trigger the tag to self-alarm as well as the system will alarm.

Remote Alarm: When the tag alarms, it will send a signal to remote alarm reader. The reader will alarm synchronously.

Removal of the Tag: The sales associate places the tagged merchandise on the IR Smart Detacher, its important to make sure the IR window on tag is aligned with IR transmitter window on the detacher. You will hear a beep from the tag (this indicates that the tag is deactivated), the locking lever will automatically switch to the unlocked position. The sales associate can now safely remove the tag from the package box.

Complete protection!

Available with Active RFID chip set.

Measurements:

Width: 1.377" / 34.97mm

Length: 2.7" / 70mm

Thickness: 0.5" / 14.10mm

Band Length S 4" / 101mm Expands to 8"/202mm

Band Length L 10" / 254mm Expands to 20"/508mm
