

Bandit Smart Tag

The Bandit Smart Tag stands out as a cutting-edge solution tailored for the advanced security of boxed merchandise, offering both enhanced protection and user-friendly functionality for your employees. Its design prioritizes efficiency, ensuring faster application and removal by authorized detacher's compared to any other EAS box tag in the market. Beyond its speed, the Bandit Smart Tag can be customized with up to four distinct alarm levels, providing a versatile and robust defense mechanism against theft or tampering. This innovative security feature not only safeguards your valuable merchandise but also provides a comprehensive solution to meet the evolving challenges of retail security.

The Bandit Tag simplifies the secure attachment of boxed merchandise, ensuring a reliable solution for your inventory needs. The Bandit Tag introduces a user-friendly slide lever feature that activates the smart tag when engaged, allowing for effortless one-handed operation. The tag smoothly releases upon deactivation, thanks to an automatic unlocking mechanism tied to the lever. Enhancing functionality, the bottom plunger detects surface contact with precision. The Bandit Tag full-size plunger, equipped with an anti-slip backing for maximum surface contact and a secure hold.

Remote Alarm:

In the event of an attack to a tag, the Wi-Fi visual and audible remote alarm (Bubble) activates with a high pitch sound this empowers Loss Prevention to address the incident within the store vs at the door. Supported by cloud-based data storage allows LP departments to conduct comprehensive forensic investigations, tracking alarms with video data categorized by store location, department, and time of day.

Option 4 Alarm: WG's patented IR technology guarantees an elevated level of security. Available in 58kHz, 8.2 kHz and RFID frequencies

EAS Alarm: In an armed status, any event that brings the tag into the EAS system's field will prompt the tag to self-alarm, simultaneously triggering the EAS system to alarm.

Remote Alarm: Upon activation of the tag's alarm, a signal is transmitted to the remote alarm reader, resulting in synchronous alarm activation.

Removal of the Tag with an S3 Key: To remove the tag, the sales associate places the S3 Key on the tag aligning the ears of the key with the indents on the Bandit Tag the locking lever automatically shifts to the unlocked position. With the tag now deactivated, the sales associate can safely remove it from the package box.

Removal of the Tag with IR detacher: To remove the tag, the sales associate places the tagged merchandise on the detacher ensuring precise alignment of the IR window on the tag with the IR transmitter window on the detacher. A beep from the tag signals successful deactivation, and the locking lever automatically shifts to the unlocked position. With the tag now deactivated, the sales associate can safely remove it from the package box.

Measurements:

Width: 1.377"
