

The start of something new

IR Mini Detacher

Mini IR Desktop Detacher

The **Mini IR Desktop Detacher** is a compact and secure tag removal solution designed for retail environments using IR-protected security tags. With its small desktop footprint and advanced infrared technology, it provides controlled and efficient tag removal at the point of sale.

Key Features

- **Infrared (IR) Code Protection** – During detaching, the device transmits a unique infrared code to the tag, allowing authorized removal without triggering an alarm.
- **Compact Desktop Design** – Small, space-saving unit designed to sit conveniently on the checkout counter without disrupting workflow.
- **Alarm Silencing Function** – If an **IR alarm tag** is activated due to tampering, the detacher transmits a signal to silence the alarm prior to removal.
- **SuperLock & Standard Lock Compatibility** – Opens **IR-protected tags** as well as tags using **SuperLock and standard magnetic locks**.
- **POS Integration Capability** – Can be connected to a POS system for controlled operation and enhanced security.
- **Automatic Security Lockout** – When connected to a POS system, the IR function can be disabled when the system is powered off, preventing unauthorized tag removal.
- **Reliable Retail Performance** – Built for consistent, secure use in high-volume checkout environments.

Specifications

- **Power Supply:** USB-C connection or external power adapter
- **Design:** Compact desktop unit

Applications

Ideal for **retail checkout counters**, providing secure, space-efficient, and controlled removal of IR security tags while maintaining a clean and professional point-of-sale setup.
