

Ninja Extreme

Information

IR Ninja Extreme Smart Tag, small & compact, powerful & robust. The new push button feature once pressed activates the IR Ninja Extreme Smart Tag. When the tag has been deactivated the slide lever will automatically open allowing for an easy release. (One Handed Operation) The new full-size plunger covers a greater surface area, this eliminates false alarms. With the addition of our new slick adhesive backing, designed to securely adhere to round or odd shaped packaging for that secure fit.

WG's audible/visual remote alarm sounds once an attempt or an attack has been made to the smart tag. This remote can detect an attack on a tag up to 40 ft away via WG's smart technology.

Cloud based data storage is available at no additional charge through WI-FI access. This allows the LP or AP departments to forensically investigate and track alarm activity with video by store, department and time of day.

IR Ninja Extreme Smart Tag or any WG IR Smart Tag can only be deactivated with a WG IR detacher. The IR Smart Detacher plays a vital role in the IR Technology. Without this uniquely designed detacher the fourth alarm setting, which makes our IR smart tags the powerful protection tool they are, would be negated.

The IR Smart Detacher is also a deactivator.

Smart electronics surrounding the magnet emit a coded IR signal that disarms the smart tag upon detachment. Now the tag can be removed without self-arming. Any attempt to use any other detacher or magnetic material to remove the IR Smart device will result in a self-arming.

The IR Smart Detacher can also detach any other hard tag. It is available in a desktop, a handheld multi-functional, or flush mounted version which can be installed into your cash wrap.

(Available in 3 alarm)
